

13

RING MAIN SYSTEMS

Ring main systems consist of a closed loop, or a ring, of piping surrounding an area where air will be consumed at high pressure. Branch pipes are connected to the main ring and run along walls or ceilings to various facility consumption points.

Tube for Compressed Air Applications

Applications

- Compressed air
- Vacuum
- Calibrated extrusion

Benefits

- Easy & rapid to install
- Reduced pressure drop
- Corrosion resistance
- Fire resistance
- UV resistance
- Good shock resistance
- No welding

Specifications

Material: EN AW-6060 T6 aluminium
 Treatment: Internal & external chromatising
 Paint: RAL 5015 electrostatic painting
 Temperature range: -20°C to +70°C (-4°F to +158°F)
 Pressure: -0.8 to 15 bar

Carriage for 3 & 6 metre lengths charged at cost
 Please ask for details

Fittings for Compressed Air Applications

SR Series

Sicomat's SR Series offers a practical and helpful solution for compressed air distribution, whether for small distribution systems or large industrial plants.

The SR Series is based on calibrated aluminium pipes that are surface treated and range in size from 20 mm to 63 mm, with profiles of 80 mm and 110 mm. The fittings used for junctions have high resistance to shock and pressure and have been tested by the TÜV Certification Institute for product durability. The SR Series has been tested four times more than the average working pressure (PN12.5).

These tests show that the SR Series is highly resistant to stress generated by water hammer pressure changes and durable in salty fog. The exterior coating on the SR Series ensures low friction for air passage and quick installation time, thanks to the colour-coded lines that comply with fluid identification regulations, eliminating the need for subsequent pipe coating.

The SR Series is compatible with all other Sicomat products, making it a complete, flexible and functional system for all fluid distribution needs in typical industrial use

SK Series

The experience gained from the SR Series has led to the development of the SK Series, which is a reliable and efficient push-fit solution for compressed air distribution.

The SK Series comprises three aluminium sizes – Ø15, Ø22, and Ø28 mm – and is assembled using nylon fittings.

Tests have shown that the SK Series has excellent resistance to stress caused by water hammer pressure changes and can withstand salty fog for extended periods.

Specifications

Body:	Black nylon
Coupling ring:	Blue nylon
Cutting ring:	301 stainless steel
Sealing:	NBR O-ring
Temperature range:	-20°C to +70°C (-4°F to +158°F)
Pressure:	-0.8 to 12.5 bar

Aluminium Profiles & Fittings for Compressed Air Applications – 80/110 Diameter

The System

- Speed & simple installation
- Easy fit hinges
- Low maintenance
- High safety
- Reduced pressure drop
- Corrosion resistance
- Reusable
- Fire resistance
- UV resistance
- Good shock resistance
- No welding

PIPE SPECIFICATIONS

Material	Aluminium EN AW-6063 T6
Paint	RAL 5015 & 7001 electrostatic painting
Suitable for	Compressed air
Temperature	-20°C to +70°C
Pressure	-0.8 to +16 bar

FITTING SPECIFICATIONS

Body	EN AB 46100 aluminium
Sealing	NBR O-ring
Suitable for	Compressed air
Temperature	-20°C to +70°C

SharkBite Ring Main System

Create An Efficient High Performance Solution

SharkBite offers an air and pneumatics push-fit range that makes pipe connections fast, simple, and reliable. The fittings are made of brass and come in sizes ranging from 10 to 54 mm, making them suitable for small and large commercial and industrial applications. These fittings can withstand high pressure and meet various system requirements. They can be used from the compressor to the point of use, and the range includes a 45° elbow for improved airflow.

The fittings use a simple push-fit action to instantly connect pipes without needing tools, silicone, hot works, solder, or glue. Additionally, the fittings can be disconnected with a secure demounting tool, making system extensions and modifications quick and easy.

SharkBite fittings are designed to grip anodised aluminium pipes securely and are compatible with powder-coated aluminium, copper, PEXa, and nylon pipes.

Features

- Engineered brass body
- Push-fit connection ends
- Tamperproof secure demounting tool
- Nitrile O-ring & stainless steel grab ring
- Suitable for air & vacuum applications up to 20 bar

Benefits

- Reliable leakproof solution that withstands high-pressure
- Instant, tool-free, push-fit connection with no hot works, silicone, solvent or glue
- Corrosion-free solution that extends equipment lifecycle & reduces maintenance
- Quick & easy system reconfiguration & extension, with minimal downtime
- Lightweight & easy to handle material
- A versatile solution that connects to metal or plastic pipe

Air System Configuration

The SharkBite air & pneumatics system enables quick assembly from the compressor to the airline and the complete ring main and take-off points.

Tolerance	-0.10 mm to +0.05 mm OD

MAKING A CONNECTION

CONNECTING PUSH-FIT

Cutting the pipe

Cut the pipe square using a rotary pipe cutter & then deburr using a SharkBite depth / deburring tool. There should be no burrs or sharp edges on the pipe end as this can damage the O-ring during pipe insertion.

Measure the depth

Using the appropriate depth marker demounting clip or tape measure, mark the insertion depth onto the pipe.

Making the connection

Align the pipe squarely with the fitting de-mounting ring & push the pipe into the fitting with a slight twist until the pipe reaches the pipe stop. If using plastic pipe, use a liner if specified by the pipe manufacturer.

DEMOUNTING PUSH-FIT

Demounting 10 – 28 mm with clip

Holding the fitting in the palm of the hand, snap the demounting clip over the pipe, with the SharkBite logo away from the fitting. Slide the clip up to the demounting ring & press firmly on the two 'finger pads', while simultaneously twisting & pulling the pipe to release.

Demounting 10 – 28 mm with tongs

Position the tongs over the fitting & pipe with the SharkBite logo facing away from the fitting. Squeeze the tongs together, while gripping the pipe in the other hand, simultaneously twist & pull the pipe to remove, if necessary. Use the thumb as a lever to assist release.

Demounting 35 – 54 mm UXL

Snap the demounting clip over the pipe & locate the clip slots over the two studs in the end cap. Rotate the clip clockwise by 10° until it locks, then twist & pull the pipe from the fitting.

Note: SharkBite fittings utilise a PTFE coated O-ring. This coating is semi-permanent & multiple pipe insertions / de-mountings will remove this coating, making pipe insertion harder.

John Guest Ring Main System

Make Reliable Connections the Fast and Simple Way

John Guest's range of air and pneumatic push-fit fittings and pipes are designed to ensure quick and easy installation while guaranteeing airtight pipe connections. Their fittings are available in sizes ranging from 3 to 28 mm and are sturdy enough to meet the demands of small to mid-size applications such as garages and other commercial air piping systems.

What sets John Guest apart is their rapid assembly process that eliminates the need for tools, threaded pipes, solvent and glue. With a simple push-fit action, their unique collet locking design firmly and securely holds the pipe in place without deforming it or restricting flow. This feature makes their air systems easy to extend or alter and reduces maintenance and production downtime as fittings are fully demountable without using tools.

John Guest's fittings are available in rigid engineered plastic or brass. They also offer a unique water trap that removes moisture from the airline to improve system performance and longevity. Their versatile solution is designed to work with nylon, powder-coated aluminium pipe, or LLDPE pipe, and it is also compatible with copper, PEXa, and other soft metal pipes.

Features

- Acetal copolymer or brass fittings
- Push-fit connection ends
- Demountable design without using tools
- Secure collet cover to prevent accidental disconnection
- NBR O-ring & collet with stainless steel teeth
- Suitable for air & vacuum applications up to 10 bar

Benefits

- Reliable leakproof solution that grips before it seals
- Instant, tool-free push-fit connection
- Corrosion-free solution that extends equipment lifecycle & reduces maintenance
- Fast and straightforward system alterations or extensions with minimal downtime
- Lightweight & easy to handle material
- A versatile solution that connects to metal or plastic pipe

Air System Configuration

The John Guest air & pneumatics system enables quick assembly from the compressor to the airline, including the complete ring main and take-off points.

Specifications

MATERIALS	
Bodies	Acetal copolymer
O-rings	NBR
Collets	Acetal copolymer with stainless steel teeth
TUBE TOLERANCES	
Size	12 mm to 28 mm OD
Tolerance	-0.10 mm to +0.05 mm OD

MAKING A CONNECTION

CONNECTING PUSH-FIT

Cutting the pipe

Cut the pipe square. Ideally use a John Guest pipe cutter for rigid nylon pipe & aluminium pipe cutters for aluminium pipe. To avoid damage to the O-ring remove any burrs & sharp edges.

Making the push-fit connection

Push the pipe up to the pipe stop.

Check the connection is secure

Pull to check a secure connection is made. Test the system before use.

DEMOUNTING PUSH-FIT

Demounting push-fit fittings

To disconnect, ensure the system is depressurised. Push the collet towards the fitting & remove the pipe. Fittings are reusable.

CONNECTING & DEMOUNTING SCREW CAP

Connecting screw cap fittings

After inserting the pipe, a 1/4 turn of the screw cap locks the collet in place & reduces lateral & sideways movement of the pipe.

Demounting screw cap fittings

To disconnect, 1/4 turn the screw cap, push the collet & remove the pipe. Fittings are reusable.

Note: Whilst we recommend the use of John Guest rigid nylon pipe, John Guest fittings can also be used with copper or aluminium pipe.

Tube & Fittings for Nitrogen Applications

Applications

- Ideal for transporting nitrogen, widely used in car repair workshops & assembly lines
- Compressed air
- Vacuum

Benefits

- Easy & quick to install
- Reduced pressure drop
- Corrosion resistance
- Fire resistance
- UV resistance
- Good shock resistance
- No welding

TUBE SPECIFICATIONS

Material	EN AW-6060 T6 aluminium

Tube & Fittings for Vacuum Applications

Features

Sicomat vacuum pipes and fittings offer a simple, cost-effective, and quick installation solution for central vacuum systems in auto repair shops and production lines. The system is based on an aluminium conduit, which is externally powder-coated (RAL 7040) and internally phosphochromatised. This conduit forms the basis of the Sicomat vacuum lines.

A 63 mm diameter strikes an optimal balance between system compactness and intake volumes. This diameter ensures extremely low friction coefficients inside the pipe, making it an efficient solution for the intended purpose.

The System

- Easy & rapid installation
- Reduced pressure drop
- Corrosion resistance
- Reusable
- Fire resistant
- UV resistant
- Good shock resistance
- No welding

PIPES SPECIFICATIONS

Material	Aluminium EN AW-6060 T6
Coating	RAL 7001 electrostatic coating
Temperature	-20°C to +70°C
Pressure	-0.8 to +15 bar
Compatible fluids	Compressed air vacuum nitrogen

FITTINGS SPECIFICATIONS

Body	Black nylon
Coupling ring	Grey nylon
Ring	301 stainless steel
Sealing	NBR O-ring
Temperature	-20°C to +70°C
Pressure	-0.6 to +12.5 bar
Compatible fluids	Compressed air vacuum nitrogen

PARKAIR® Malleable Cast Iron Fittings

Standard References

The characteristics of malleable cast iron threaded pipe fittings for water, gas, and other installations in this catalogue conform to the international ISO 49 and the European EN 10242 standards. Please note the most recent specification of fittings according to ISO 49 and EN 10242, the so-called 'design symbol.' This symbol describes the material and the form of the thread. The symbol 'A' designates the following product versions. The material used is high-quality white heart malleable cast iron according to EN 1562: EN-GJMW-400-5.

Quality Assurance

Our fittings are certified to withstand 40 bar of hydrostatic pressure according to DIN ISO 9001/2008.

Surface Layer

We can supply black or galvanised (hot-dip, zinc-coated) fittings upon request. A temporary protective layer is also applied to prevent superficial rust.

Assembly of Unions

It is essential to clean the conical seats before assembly to achieve a sealing effect without using a gasket on taper seat unions (96, 98, 340, 341). Apply a thin lubricant film on both conical surfaces, such as oil or EN 7512-compliant lubricant (such as Loctite® 8104). It is possible to reuse taper seat unions, but please note that PARKAIR does not guarantee sealing performance in this case.

Designation of Size

Fitting size is designated as follows:

- Fittings with all outlets of the same size are referred to by one size regardless of the number of outlets.
- Fittings with two outlets of different sizes are specified by their outlets in decreasing order (first, the larger, followed by the smaller outlet).
- Fittings with more than two different size outlets and a reducing on run, or with three other outlets, are specified as follows:
- Additionally, unequal fittings with more than two outlets but no reduction on the run are specified according to the following method:
 1. Tees 81 with equal outlets on the run and an increasing or decreasing outlet on the branch are specified by the size of the run followed by the branch size. For example: 1 1/2" – 3/4"
 2. In reducing cross C1, the size of the most extensive run is specified first, followed by the size of the two smaller (but equal) branches. For example, 1 1/2" – 1".

Crane Malleable Iron Fittings

Key Features

- Taper to taper thread joints ensure full engagement, eliminating localised stress on pipe or fitting and offering a substantial pressure seal.
- Design standard BS EN 10242
- Thread standard BS EN 10226-2 taper
- UL approved for use on sprinkler systems
- Kitemark approved by BSI

Conformance of Crane Fittings

Both malleable iron and steel fittings have received verification from the British Standards Institute (BSI) for conforming to BS EN 10242, BS 143, and BS 1256, respectively. Therefore, they can display the British Standards Kitemark Logo with Kitemark Licence No. KM00382. Some fittings that are smaller in size are produced in steel and comply with BS EN 10241.

Pressure and Temperature Ratings

According to BS 143 and 1256, fittings are designed for general fluid transmission within specific pressure and temperature ranges. The graph below shows the BS pressure-temperature ratings. Most Crane malleable iron fittings are suitable for these new ratings, except for certain unions (please see the note below the graph). However, the suitability of the connecting pipe material, the threaded joint, and any thread sealant used should be considered. It is also essential to follow any applicable codes of practice. The maximum non-shock gauge pressure is mentioned in the specifications.

* Hot dip zinc coated (galvanised) fittings should not be used below -10°C (14°F).

CRANE241 flat seat unions are limited to a maximum of 230°C .
CRANE271 and CRANE289 female equal unions with spherical seats are limited to a maximum of 208°C .

Finish

All malleable iron fittings receive an oil finish to protect against rust during storage, transit, and after installation before commissioning. The finished fittings are free of polycyclic aromatic hydrocarbons.

Pipe Threads

Crane fittings feature machined threads that comply with the gauging standards of BS EN 10226-2. All fittings are designed with chamfered threads that facilitate assembly and prevent cross-threading issues. Additionally, female fittings come with a chamber behind the thread that allows for the hassle-free assembly of male threads without any restrictions.

Testing

As per the requirements of BS EN 10242 or BS 143 and 1256, the fittings undergo production testing. Moreover, as per the standards of BS EN 10242, BS 143 and 1256, and ISO 49, all pressure-containing fittings are designed to withstand specified design test pressures and are type-tested accordingly. For sizes 4 and smaller malleable iron fittings, the required pressure is 100 bar (1450 lbf/in²), and for sizes 5 and 6 malleable iron fittings, it is 64 bar (928 lbf/in²).

Please note:
* Only available in mild steel

PARKAIR® 304 Stainless Steel Press Fittings

Applications

A cost saving grade 304 stainless steel fitting designed for use with:

- Drinking water (fully WRAS approved)
- Purified water
- Heating
- Cooling water (chilled water)
- Boosted cold water
- Plant rooms
- Steam condensate
- Flammable gases classed and according to DVGW G 260 and G 262 (HNBR Gas Approved yellow seals)
- Compressed air, argon, nitrogen, carbon dioxide

Materials

Formed components (fittings) material no.:
1.4404 according to EN 10088/304

Casting components (threaded fittings) material no.:
1.4408 according to EN 10283/304

Pipes material no.:
1.4301 according to EN 10088-3

Pressure and Temperature Ratings

When used alongside fittings with EPDM seals for applications other than compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +120°C

When used alongside fittings with HNBR seals for applications involving flammable gasses:

15 – 108 mm: (PN5) 5 bar -20°C to +70°C

When used alongside fittings with EPDM seals for compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +120°C

**316 stainless steel press fittings also available.
Please contact your distributor for further information.**

MAP 215 FEATURES

- Suitable for stainless steel & carbon steel as well as copper press fittings in sizes up to 28 mm
- 350° rotating jaw holder
- Built-in LED lamp & OLED display with clock
- Automatic stop and retraction when crimp completed saves time & battery life
- Quickstop function for safety
- Hydraulic pressure control for precise control of crimping force
- Easy operation due to compact, lightweight design with secure grip

SPECIFICATIONS

Pressing / crimping force	15kN
Battery	Makita lithium-ion (18v, 1.5Ah)
Battery capacity	Approx. 150 press cycles
Charging time	Approx. 25 minutes

CONTENTS

- Klauke MAP215 machine
- 1 battery
- Charger
- 3 M-profile press jaws (15 mm, 22 mm & 28 mm)

PARKAIR® Carbon Steel Press Fittings

Applications

A premium grade carbon steel pipe with a 10-year guarantee, designed for use with:

- Heating (closed systems only)
- Cooling water (chilled water – closed systems only)
- Compressed air
- Sprinkler systems (pressurised systems only)

Materials

Formed components (fittings) material no.1.0034 according to EN 10305, ext galvanised

Casting components (threaded fittings) material no.1.0034 according to EN 10305, ext galvanised

Pressure and Temperature Ratings

When used alongside fittings with EPDM seals for applications other than compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +100°C

When used alongside fittings with EPDM / FKM seals for compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +100°C

When used for extinguishing water:

15 – 108 mm: (PN16) 16 bar -30°C to +100°C

PARKAIR® Copper Press Fittings

Applications

A premium grade copper fitting, designed for use with:

- Drinking water (fully WRAS approved)
- Purified water
- Heating
- Cooling water (chilled water)
- Boosted cold water
- Plant rooms
- Steam condensate
- Flammable gases classed and according to DVGW G 260 (HNBR Gas Approved yellow seals)
- Compressed air, argon, nitrogen, carbon dioxide

Materials

Formed components (fittings) material no.: CW024A according to EN 1254

Casting components (threaded fittings) material no.: CC499K according to EN 1282

Pressure and Temperature Ratings

When used alongside fittings with EPDM seals for applications other than compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +120°C

When used alongside fittings with HNBR seals for applications involving flammable gasses:

15 – 108 mm: (PN5) 5 bar -20°C to +70°C

When used alongside fittings with EPDM seals for compressed air:

15 – 108 mm: (PN16) 16 bar -30°C to +120°C

O-ring Colour Code

Black EPDM – ethylene, propylene, diene, monomer rubber.

Green FKM – fluorocarbon.

Yellow HNBR – hydrogenated nitrile, butadiene rubber.

John Guest Speedfit – Plumbing & Heating Systems

The World-Leading Plastic Push-Fit Plumbing and Heating System

JG Speedfit offers a wide range of fittings, pipes, tap connectors, and service valves to help you complete your installation quickly and effortlessly. With its perfect push-fit and multi-seal technology blend, Speedfit creates a strong and reliable connection that is easy to install and dismantle without using tools. These fittings are compatible with copper and plastic pipes and have a 50-year guarantee. Furthermore, we provide a variety of flexible plastic pipes in both coils and straight lengths, making it easier to install in less accessible areas with reduced fittings. Installing and servicing fixtures and appliances is simple with push-fit tap connectors and service valves.

Features

- Instant push-fit connection and flexible pipe
- Collet with stainless steel teeth firmly grips the pipe
- Dual O-rings give a permanent leakproof seal
- Twist and lock increases the O-ring seal – a unique feature of JG Speedfit
- Lead-free and non-toxic
- Corrosion-free and no scale build-up

Benefits

- High performance and durable solution
- Install, demount and refit in seconds without tools
- Safe, flame-free installation, with no hot works
- Less labour-intensive, especially in tight spaces
- Fewer joints, fewer leaks, fewer callbacks
- Safer, cooler surface temperature

Warranty and Applicable Standards

Our core range of fittings and pipes now includes these products, which can be viewed online.

Specifications

WORKING TEMPERATURES & PRESSURES			
Application	Usual Working Temperature	Max. Working Temperature	Max. Working Pressure
Cold water (indirect & direct main)	20°C	20°C	12 bar
Central heating	82°C	105°C, short term Malfunction at 114°C	3 bar
Hot water (including unvented cylinders)	65°C	95°C	6 bar

PART NUMBER	TUBE OD	PRICE
JGPSE4610W	10 mm	£3.98
JGPSE4615W	15 mm	£4.08
JGPSE4622W	22 mm	£4.94

Safely & easily caps off pipework for a temporary or permanent installation. Suitable for central heating systems

**PIPE INSERT
FOR COMPRESSION FITTINGS**

2140

PART NUMBER	TUBE OD	PRICE
JGTSM10N	10 mm	£0.60
JGSTM15N	15 mm	£0.60
JGSTM22N	22 mm	£0.73
JGSTM28N	28 mm	£1.11

To be used when connecting Speedfit pipe to a compression fitting or fitting from another manufacturer. Suitable for hot & cold water & central heating systems.

TANK CONNECTOR

2140

PART NUMBER	TUBE OD	PRICE
JGCM0715S	15 mm	£5.09
JGCM0722S	22 mm	£6.50
JGCM0728S	28 mm	£25.05

Suitable for cold water tanks only

Maximum wall thickness of tank 4 mm. Requires hand tightening only

**PIPE INSERT
SUPERSEAL**

2140

PART NUMBER	TUBE OD	PRICE
JGSTS10	10 mm	£0.63
JGSTS15	15 mm	£0.63
JGSTS22	22 mm	£0.82
JGSTS28	28 mm	£1.34

Only to be used with Speedfit pipe & Speedfit fittings together, to give enhanced sealing. Creates a rigid connection & enhanced double seal when fitting a Speedfit pipe to a Speedfit fitting

Suitable for hot & cold water & central heating systems

PLUG

2140

PART NUMBER	TUBE OD	PRICE
JGPL10	10 mm	£1.59
JGPL15	15 mm	£1.81
JGPL22	22 mm	£2.02
JGPL28	28 mm	£3.18

Safely plug a connection port on a Speedfit fitting, when not required. Suitable for central heating systems

PE-COPPER CONNECTOR

2140

PART NUMBER	TUBE OD	TUBE OD	PRICE
JJGG601B	20 mm	15 mm	£13.06
JJGG603B	25 mm	15 mm	£19.56
JJGG602B	25 mm	22 mm	£15.62

Used to connect PE pipe to copper or Speedfit plumbing pipe. Must not be buried directly into ground, soil, concrete or other substrates.

Safely & securely connects MDPE to copper or Speedfit pipe (inserts required).

**ACETAL FITTINGS
FOR DRINKS & OTHER POTABLE WATER**

ACETAL FITTINGS

CM range of metric size fittings are manufactured in acetal. With a food grade EPDM O-ring, they have been developed for the water industry but are equally suitable for other potable liquids. They are also recommended for intermittent hot water applications. The CM Range is NOT suitable for compressed air & vacuum applications.

**ADAPTOR
BSPP MALE**

2140

PART NUMBER	TUBE OD	THREAD	PRICE
JGCM011514S	15 mm	1/2" BSPP	£2.62
JGCM012216S	22 mm	3/4" BSPP	£3.89

**TAP ADAPTOR
BSPP FEMALE**

2110

PART NUMBER	TUBE OD	THREAD	PRICE
JGCM321014E	10 mm	1/2" BSPP	£3.46

SUITABLE FOR CENTRAL HEATING SYSTEMS

STANDARD FITTINGS – Look for this symbol

- Grip & seal cartridge with stainless steel teeth & main O-ring seal
- Compatible with hot & cold water & central heating systems, unless stated otherwise
- Suitable for use with plastic or copper pipe

**BRASS STOP VALVE
BODY & HEAD DZR BRASS**

2140

PART NUMBER	TUBE OD	PRICE
JG15BSC	15 mm	£32.14

Not suitable for potable water
Durable brass bodied screw-down mains stop valve

1/4 TURN VALVES – Look for this symbol

These valves have been designed to allow temporary servicing of downstream equipment & must only be used in the fully open or fully closed position.

DO NOT use these valves:

- In a partially open position to control flow
- To provide a permanent termination
- Without tubing assembled or plugged (or threaded connections sealed)
- As a tap or 'faucet'

**BRASS DRAIN COCK
DZR BRASS**

2140

PART NUMBER	TUBE OD	PRICE
JG15BDC	15 mm	£13.80

Speedfit drain cocks cannot be used where collet covers are fitted.
They can be used with a standard fitting fitted with a collet clip.
Stem ended drain off valve provides an ideal drain down point.

BRASS SERVICE VALVE

2140

PART NUMBER	TUBE OD	PRICE
JG15HSV-BRA	15 mm	£22.78

Durable brass service valve allows isolation of the appliance for maintenance

**SERVICE VALVE
WITH TAP CONNECTOR
BSPP FEMALE BRASS CHROME PLATED**

2140

PART NUMBER	TUBE OD	THREAD	PRICE
JG15PTSV	15 mm	1/2" BSPP	£24.50
JG22PTSV	22 mm	3/4" BSPP	£55.79

Chrome finished, one piece combined service valve & tap connector

**SERVICE VALVE

The pipe has an inner barrier to stop the ingress of atmosphere

PARKAIR® uPVC Pipe Fittings

uPVC, which stands for unplasticised polyvinyl chloride, is a widely used thermoplastic material for pipework installations. Its advantages include being lightweight, having excellent resistance to chemicals and abrasion, and being tasteless and odourless, making it great for potable water systems and most food products. Additionally, the smooth bore of uPVC pipes provides excellent flow characteristics. You can identify uPVC products by their dark grey colour.

uPVC is resistant to most acids, alkalis, salts, and solvents mixed with water. However, it is not resistant to aromatic chlorinated hydrocarbons. Connections can be made using solvent cement or BSP threaded fittings.

Manufacturing Standards

Our uPVC fittings, including elbows, equal tees, caps, and adaptors, are Kitemark certified with certificate number KM 654613. Additionally, our uPVC products are WRAS-approved. We manufacture imperial uPVC products to the following industry standards:

Pipe – EN1452-2

Fittings – EN1452-3 / BS4346 Part 1

Threaded fittings – BS21, DIN2999, ISO7

Specifications

Unless otherwise stated, PVC pressure fittings have the following pressure ratings:

Solvent weld – 3/8" to 8" = Class E/15 bar

10" = Class D/12 bar

Threaded = Class D/12 bar

* All quoted at 20°C

Pressure ratings for plastic pipework systems are typically provided for a temperature of 20°C. A fundamental principle in these systems is that increasing the temperature will reduce the pressure rating. uPVC systems should never be used for temperatures over 60°C.

Please refer to the chart below to understand the uPVC pipework systems' pressure / temperature relationship.

When installing pipes above the ground level, it is essential to provide sufficient support to ensure that the weight of the pipe and its contents are adequately supported. Please refer to the table to the right to determine the recommended maximum support spacing for horizontal uPVC pipes carrying water.

Tube NB,
Nominal bore or
nominal pipe size

PARKAIR® ABS Pipe Fittings

ABS, which stands for acrylonitrile butadiene styrene, is a highly durable thermoplastic used in various industries, including food and beverage production, sewerage, and water treatments. This type of pipework system is known for its exceptional impact and chemical resistance, making it a popular choice for many applications.

ABS is also non-toxic, meeting the toxicological requirements of the British Plastic Federation, British Biological Research Association Code of Practice for Food Usage 45/5, and EEC requirements for plastic materials in contact with foodstuffs. The system is lightweight, sturdy, and easy to install using solvent cement. ABS products are identifiable by their light grey colour.

While ABS is resistant to a wide range of diluted inorganic acids, organic acids, salts, animal fats, and oils, it is not impervious to organic solvents, alcohol, petrol, acetic acid, or vegetable oils.

Manufacturing Standards

ABS products are generally manufactured to the following standards:

Primeline pipe – BS5391 Part 1

Fittings – BS5392 Part 1

Threaded fittings – BS21, DIN2999, ISO7

Specifications

Unless otherwise stated, ABS pressure fittings have the following pressure ratings: * All quoted at 20°C

Solvent weld – 1/2" to 8" = Class E/15 bar

10" = Class D/12 bar

Threaded = Class D/12 bar

Pressure ratings for plastic pipework systems are quoted at a standard temperature of 20°C. If the temperature increases, the pressure rating must decrease accordingly. It is crucial to avoid using ABS systems for temperatures exceeding 70°C. Refer to the chart below to understand the relationship between pressure and temperature in ABS pipework systems.

In above-ground installations, supporting ABS pipes and their contents is essential. The recommended maximum spacing for ABS pipes depends on the following operating conditions:

1. Fluid density of not more than 1g/cm³
2. PN15 pipe
3. Horizontal pipe runs

Tube NB,
Nominal bore or
nominal pipe size
